Project Name:

Community Help & Service Management System

Problem Statement

People in a community may need different types of help such as food, clothing, education, medical support and other services. At the same time, volunteers, donors, NGOs and service providers may be willing to help but may not be properly connected. The proposed community Help & Service Management system provides a platform where people can submit help requests and receive suitable community support.

Why does this problem exist?

1. People may not know where to find suitable community services.
2. Help seekers and volunteers may not be properly connected.
3. Help requests may be managed manually.
4. Response to help requests may be delayed.
5. It is difficult to track pending and completed requests.
6. Available donations and resources may not reach the right people.
7. Lack of proper records makes service management difficult.

Who are the Stakeholders?

Internal Users:

1. System Administrator
2. Community Service Coordinator
3. Organization Management
4. System Developer

External Users:

1. Community Members
2. Volunteers
3. Donors
4. NGOs / Charitable Organizations
5. Service Providers

Expected System Users

1. Help seekers - submit help requests.
2. Volunteers - accept and provide help.
3. Donors - provide donations and resources.
4. NGOs / Organizations - provide community support.
5. Service Providers - provide required services.
6. Administrator - manages users, requests and services.

Objectives of the Project

1. To develop an online community help and service management system.
2. To help people submit help requests easily.
3. To connect help seekers with suitable volunteers and organizations.
4. To manage community service requests efficiently.
5. To reduce delays in providing community support.
6. To maintain proper records of requests and services.
7. To improve coordination between community members and helpers.

Expected Outputs

1. User registration and profile management.
2. Collection of help request information.
3. Display of available community services.

4. Help request submission and tracking.
5. Request verification and approval.
6. Volunteer or service provider assignment.
7. Storage of user and service records.
8. Community service reports and information.
9. Easy access to community help and services.

Functional Requirements

1. User Registration and Login
2. Profile Management
3. Help Request Management
4. Donor Management
5. Request Verification

Non-Functional Requirements

1. Security
2. Performance
3. Usability
4. Reliability
5. Availability
6. Maintainability

Hands-on Activity

Identify:

1. STRATEGIC INFORMATION

• Long-term community service requirements
• Common community problems
• Future community support planning

Example:
Community organizations can analyses long- term service requirements to support future community planning.

2. TACTICAL INFORMATION

• Availability of volunteers
• Available donations and resources
• Community support planning

Example:
Organizations can analyses available volunteers and resources to decide which services can be provided.

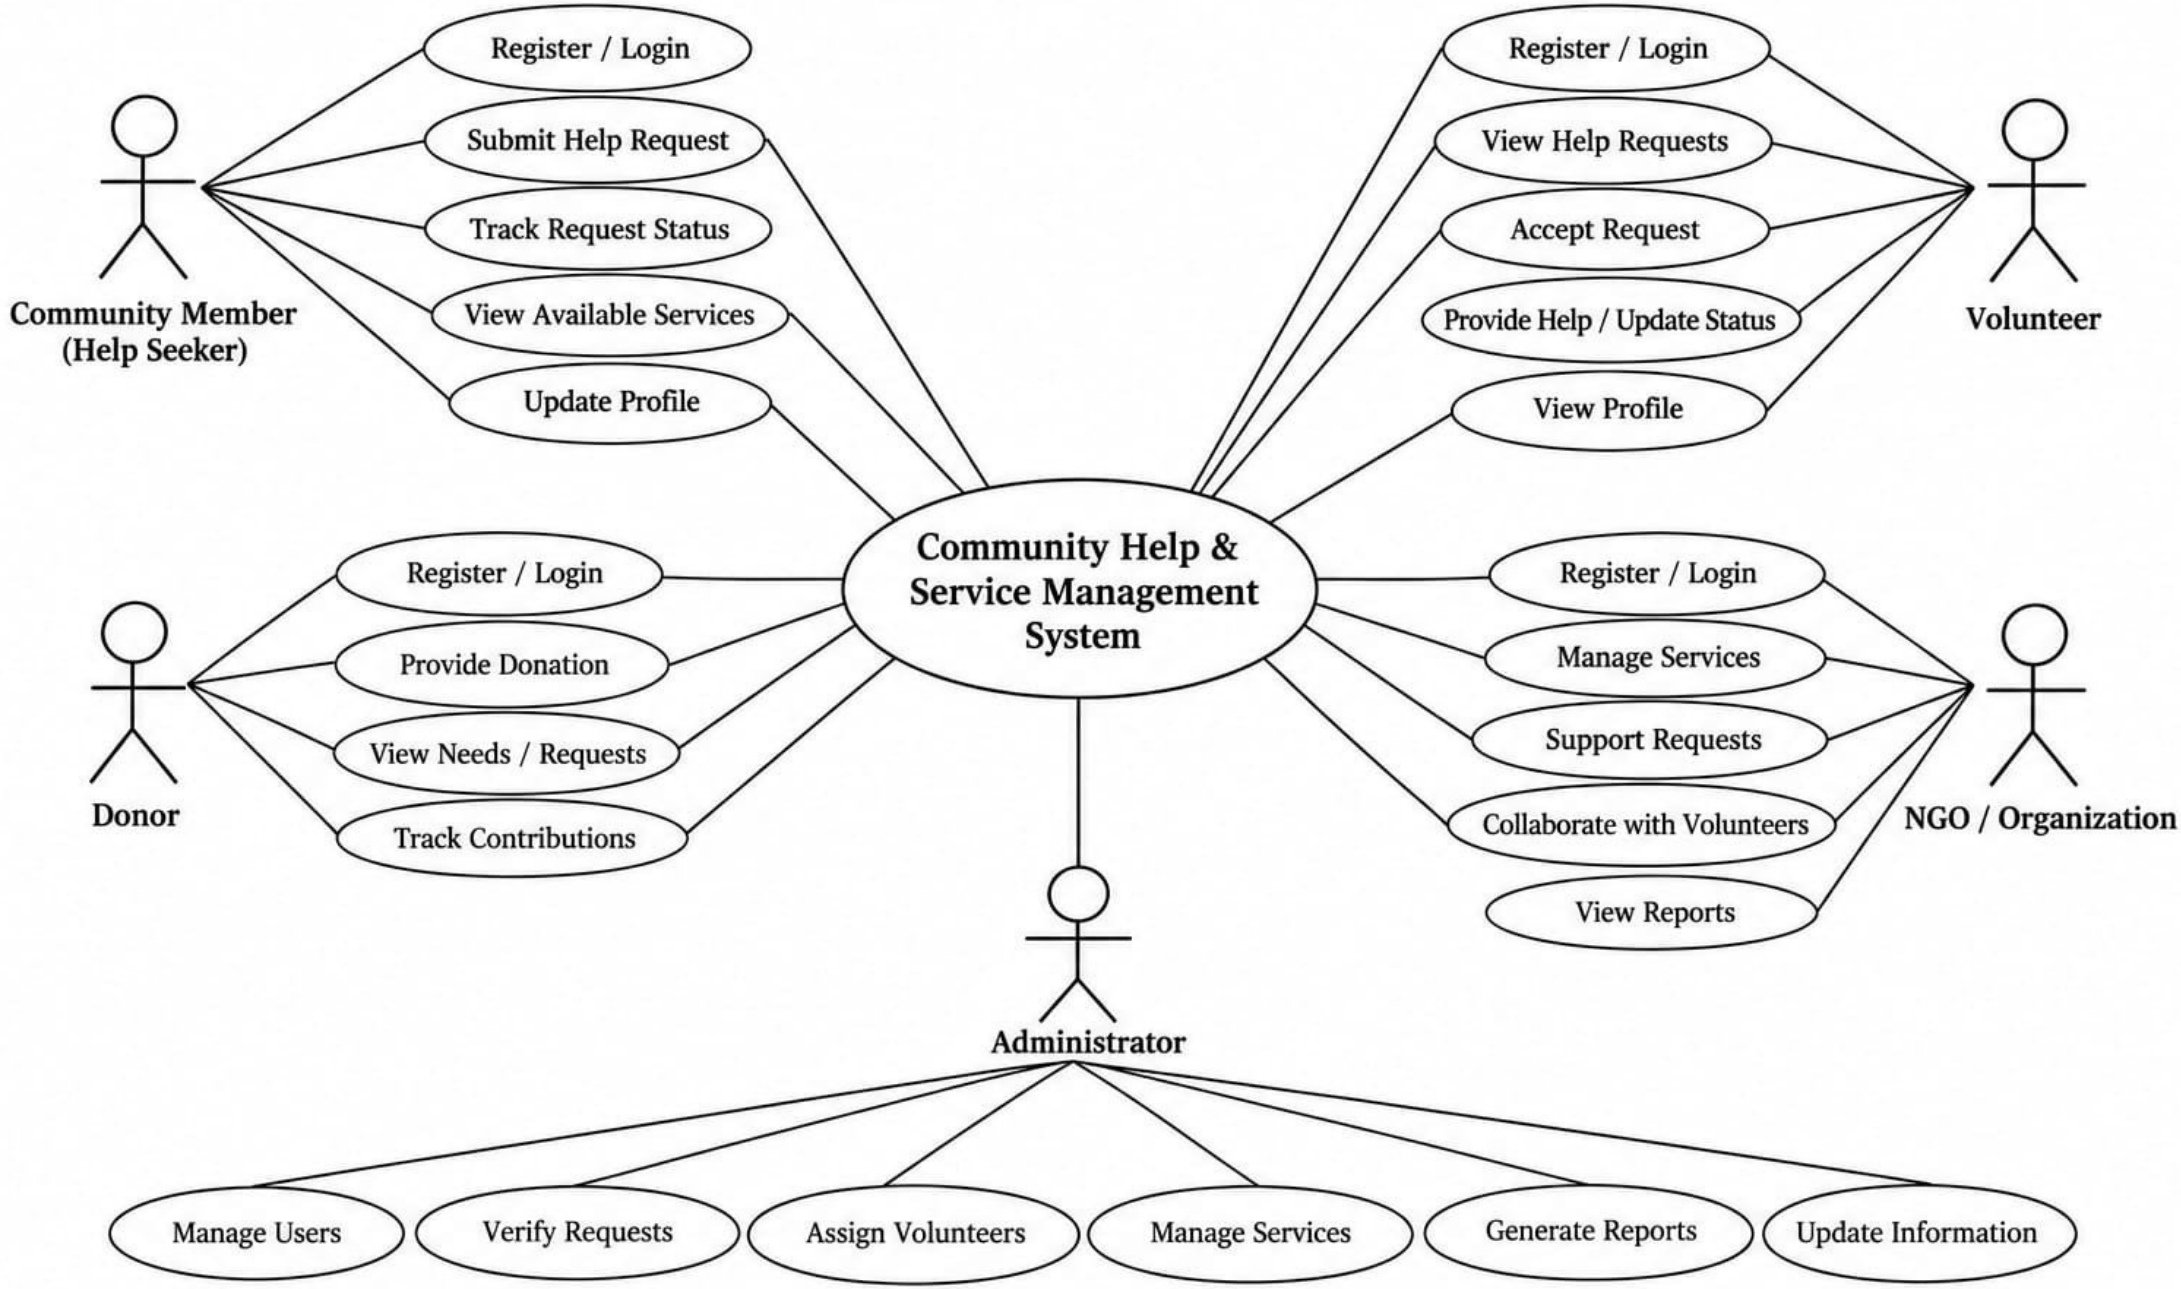

3. OPERATIONAL INFORMATION

• Help seeker details
• Help request details
• Service details

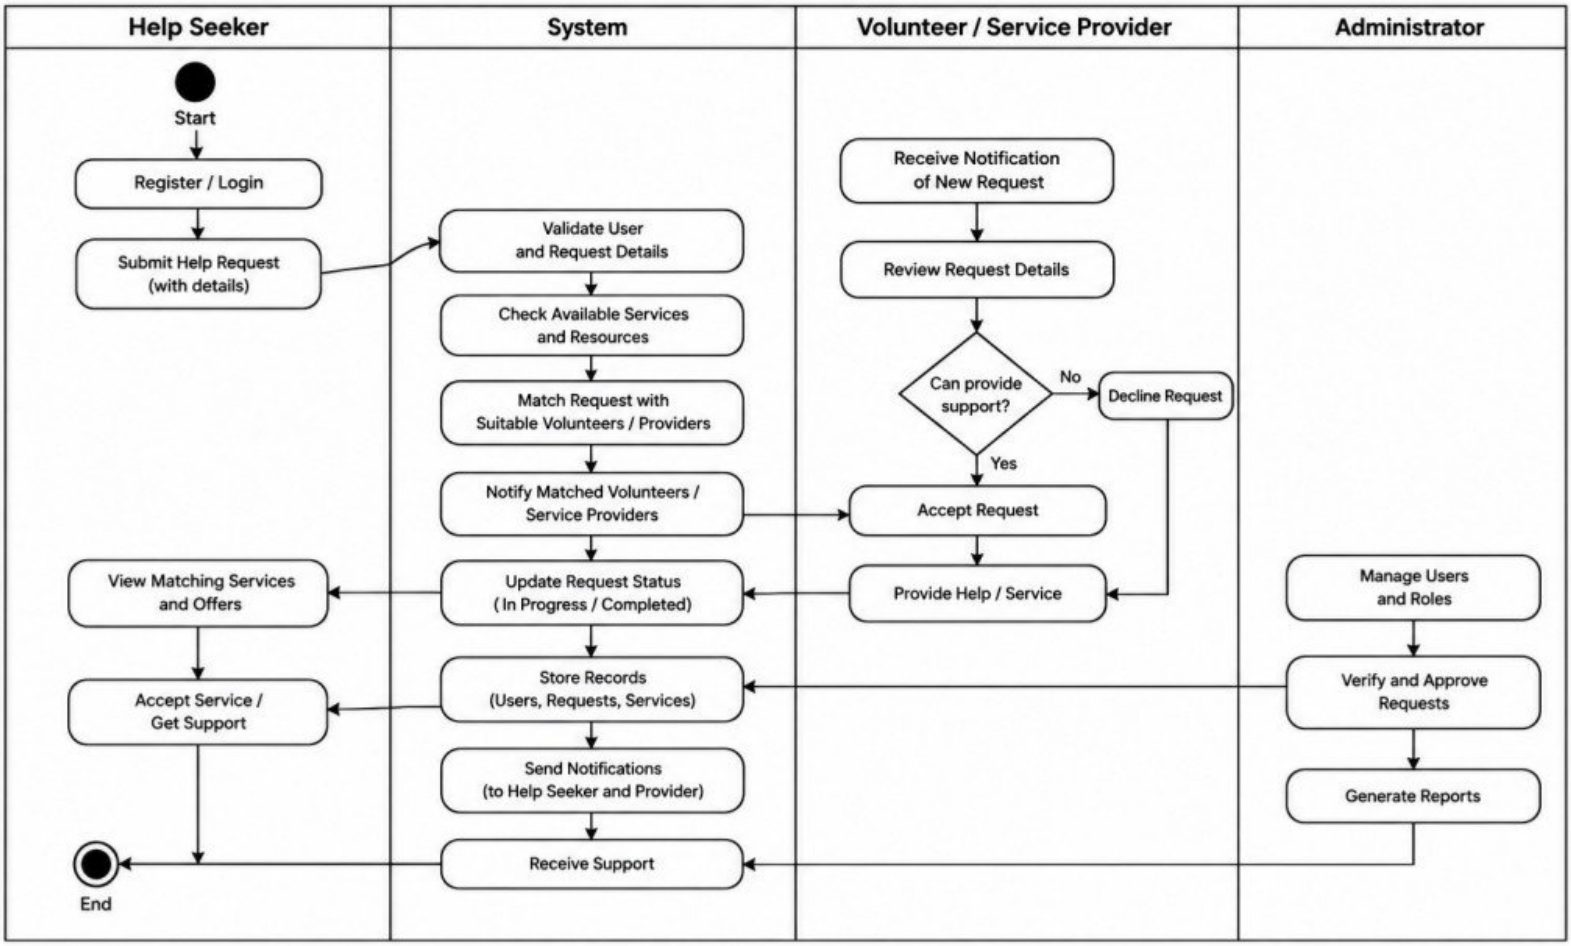

Example:
A community member can enter a help request into the system and receive suitable support from a volunteer, NGO or service provider.
